DATASET SOURCES AND ACCESS

MSc thesis | Sentiment analysis, linguistic subgroups and ethical-risk evaluation

Four source datasets: three sentiment benchmarks and one auxiliary proxy-validation corpus.

01 TweetEval - Sentiment

PRIMARY

Official dataset and split files:
https://github.com/cardiffnlp/tweeteval/tree/main/datasets/sentiment

Role: develop/select models on train/validation; evaluate once on the held-out test.

Used: 45,615 training, 2,000 validation and 12,284 test posts; three sentiment classes.

02 Sentiment140

EXTERNAL

Original Stanford archive (ZIP):
https://cs.stanford.edu/people/alecmgo/trainingandtestdata.zip

Role: binary-truth Twitter robustness condition using the unchanged three-class model.

Used: frozen EDA_03 v3 sample of 100,000 unique texts (50,000 per sentiment class).

Conflicting-label duplicates excluded; label-like ASCII emoticons removed for prediction.

03 SemEval-2014 Task 4

EXTERNAL

Original organisers' data and tools page:
https://alt.qcri.org/semeval2014/task4/index.php?id=data-and-tools

Role: review-domain, aspect-level three-class domain/task-shift stress condition.

Used: 1,758 aspect rows from 1,011 unique sentences; no target retraining.

04 SarcOji

AUXILIARY

Authors' original dataset repository:
https://github.com/VanditaGroverKapila/SarcOji

Direct source file (SARCOJI.df):
https://raw.githubusercontent.com/VanditaGroverKapila/SarcOji/main/SARCOJI.df

Used: 29,377 labelled records to assess the frozen sarcasm-indicated surface proxy.

Auxiliary evidence only: not used for source-model selection, tuning or test labels.

REPRODUCTION AND CITATION NOTES

Links point to original providers, not to the thesis-specific processed output files.

Regenerate frozen samples with the repository EDA/FINAL notebooks and manifest settings.

Follow each provider's access, redistribution and attribution conditions; no data are hosted here.

Source attributions: Barbieri et al. (2020); Go et al. (2009); Pontiki et al. (2014); Grover and Banati (2022). See the thesis references for full bibliographic details.
